

Method and System for a quality software management process

Abstract

5 A quality management framework system and method for operat-
ing a quality plan in a product development organization having
quality objectives. The system includes a plurality of computer
implemented tools accessible by users for operating a plurality
of quality processes. Data relative to the quality processes is
10 collected and aggregated to generate quality reports. Reports are
analyzed and problems are detected through a defect prevention
process. Quality actions are initiated in a feedback quality
management action tracking process.
